

RISHABH RAJ GUPTA

Flutter Developer | Full-Stack Engineer | Mobile & Web Applications

rishabhraj021official@gmail.com | [+91 88266 08330](tel:+918826608330) | [LinkedIn](#) | [GitHub](#) | [Portfolio](#)

PROFESSIONAL SUMMARY

Flutter and full-stack developer with 1.75+ years of experience delivering secure, scalable mobile and web applications for fintech, security, and enterprise clients. Specializes in Flutter (BLoC, Provider) and Node.js/React full-stack systems, with hands-on expertise in application security (SSL pinning, root/emulator detection, token-based authentication), offline-first architecture, and Azure cloud deployment. Delivered production platforms serving 500+ users with zero critical security vulnerabilities.

TECHNICAL SKILLS

- **Languages:** Dart, JavaScript, C++, Python
- **Mobile:** Flutter, BLoC architecture, Provider, Android Development, offline-first design, SQLite sync
- **Frontend:** React.js, HTML, CSS, responsive UI
- **Backend:** Node.js, Express.js, REST API design, Firebase
- **Databases:** PostgreSQL, MongoDB, SQLite
- **Security:** SSL pinning, root detection, emulator detection, token-based auth, signature verification
- **Cloud & DevOps:** Azure, Firebase, Git/GitHub, CI/CD
- **CS Fundamentals:** OOP, DBMS, Data Structures & Algorithms, Application Security

PROFESSIONAL EXPERIENCE

Software Developer | BNB Cognira

Jan 2026 – Present

- Build enterprise-grade Flutter and Node.js applications serving 500+ end users, architecting modular systems that support rapid feature delivery across multiple product teams.
- Lead Flutter UI development on Integra CRM, a CRM platform for a security & automation client — redesigning the sales dashboard, lead/opportunity management, and onboarding screens, and building animated custom-painter module icons, while preserving all existing business logic.
- Implement BLoC architecture for state management across 10+ feature modules, reducing UI rebuild overhead by 35% and improving widget re-render performance.
- Architect offline-first data solutions using SQLite with bi-directional sync mechanisms, ensuring 100% app functionality in zero-connectivity environments for field users.
- Drive Agile sprint cycles with structured planning and retrospectives, delivering 3 production releases on schedule within the first 6 months.

Software Developer | Sarabhai Information Technology

Nov 2024 – Dec 2025

- Developed and shipped 3 Flutter applications with integrated RESTful APIs, serving enterprise clients across security-sensitive operational domains.
- Implemented end-to-end application security including SSL pinning, root detection, emulator detection, and token-based authentication — achieving zero critical security vulnerabilities in production.
- Built Node.js backend APIs with PostgreSQL integration, handling 50+ endpoints across user management, reporting, and file operations.
- Integrated Firebase Cloud Messaging for real-time push notifications, lazy loading for performance optimization, and a multi-file upload pipeline supporting 10+ file formats simultaneously.

PROJECTS

Incident Reporting & Monitoring Application — Flutter · Node.js · Firebase · SQLite · REST APIs

- Built a secure, enterprise-grade incident management platform with real-time Firebase notifications, an interactive map view with color-coded severity tracking (Minor/Major/Critical), and multi-criteria filtering for rapid incident triage.
- Implemented a full application security stack — SSL pinning, signature verification, token-based authentication — and offline support via SQLite, ensuring zero data loss during network outages.
- Delivered multi-file upload supporting 10+ file types with progress tracking, memory-optimized handling for large files, and automated incident-based file naming, cutting documentation time by 40%.
- Built an email-sharing feature with grouped recipient selection sourced from a live recipients API, streamlining incident distribution to stakeholders.

Inventory Management System — MongoDB · Express.js · React.js · Node.js (MERN)

- Developed a full-stack MERN inventory management platform with CRUD operations, role-based authentication, real-time inventory tracking, and a responsive React.js UI.
- Designed and implemented 15+ REST API endpoints for inventory operations, supporting 100+ concurrent product SKUs with sub-200ms response times.

Banking Management Website — Node.js · Express.js · React.js · PostgreSQL

- Built a banking workflow simulation platform supporting customer management, money transfer, and transaction history using a Node.js backend with PostgreSQL for reliable financial data persistence.
- Implemented secure authentication and session management, with role-based access control separating customer and admin workflows.

CERTIFICATIONS

- Microsoft Certified: Azure Fundamentals (AZ-900) — Microsoft

ACHIEVEMENTS

- TCS CodeVita Season 11 — Qualified Round 1 with Rank 2740 out of 100,000+ global participants; solved 200+ LeetCode problems spanning arrays, graphs, dynamic programming, and system design.

EDUCATION

B.Tech, Information Technology

2020 – 2024

Maharaja Agrasen Institute of Technology, Delhi | CGPA: 8.13 / 10
